Foundations of Computer Programming: Flowchart and Pseudocode

Learning objectives:

- Understand the fundamental components of a flowchart
- Identify Flowchart Symbols
- Learn how to interpret and follow the logic of a flowchart
- Learn how to create a flowchart for a simple process
- Practice designing and creating simple flowcharts

Lesson exercise: Week 4

1. What is a Flowchart?
2. What are the key advantages of flowchart?
3. Create a flowchart:
    I. Outlining the process for making a cup of tea.
    II. Calculate Profit and Loss.
    III. To show a simple summation of 3 number process.
    IV. Asks a user for a number. If the number is greater than zero, the program prints "Greater than 0", then the program ends.
    V. Asks a user for a number. If the number is greater than zero, the program prints "Greater than 0". If the number is less than zero, the program prints "Less than 0". Then the program prints "Thanks for using my flowchart" and the program ends.
