Foundations of Computer Programming: Introduction to Python and IDE

Learning objectives:

- Installing Python and setting up the Integrated Development Environments
- Understanding Integrated Development Environments and their key features
- Understand the basic difference between compiled and interpreted languages
- Understand the syntax of Python
- Understand the basic use of variables
- Practicing using the IDLE IDE to write, execute, and debug simple Python programs

Lesson exercise: Week 5

1. Checklist

Install python	
Install Visual Studio Code	
Install relevant extensions	
Ran a python file	

2. Group presentation: difference between compiled and interpreted languages

Individual tasks:

3. Write a python code to print your name and at least five interesting facts about you.
4. Modify your code from the previous question by using variables to store your name and other relevant information, then print them. Furthermore, feel free to experiment and try any other ideas you may have.
5. Write a python code to print:
    - Hello World!
    - Welcome to my Python Programming!
    - Albert Einstein said "Imagination is more important than knowledge. Knowledge is limited. Imagination encircles the world."
    - Tom said, “I have always liked to hear 'I am the best' as often as possible”.
6. Write a Python code to current time.
